

Window Rubber (type R I) - after six samples, the first profile of RMOOA window rubber was approved and put into production.

For the record, the side windows of a standard RM will require approximately **49.4 metres** and if you include all of the front and rear windows, a total of **63.9 metres** would be required. Members are advised to allow slightly more than this to allow for any cutting or wastage. As for the other vehicles in the Routemaster family:

- RMLs require 57.9 metres of side window rubber and 72.4 metres in total of window rubber
- RMCs require 49.4 metres of side window rubber and 64.5 metres in total of window rubber
- RCLs require 57.9 metres of side window rubber and 73.0 metres in total of window rubber
- RMFs require 73.0 metres of side window rubber and 89.7 metres in total of window rubber
- RMAs require 50.3 metres of side window rubber and 74.6 metres in total of window rubber.

To clarify, the members price is £1.50 per metre and a standard coil of the rubber is 50 metres. However, we can cut up coils to a desired length if required but obviously we do not want to have to do this too often otherwise we will be left with odd lengths that nobody will want. After the initial period of approval and manufacture, we have increased the non-members price to £2.50 per metre but please note that neither of the prices above include postage and packing.
